CLEANING YOUR LCD MONITOR SCREENS

Below is a link to an article detailing how to properly clean LCD screens (not just the lane monitors, but also computer desktop LCD screens as well as laptop screens).

http://www.cleanlcds.com/

Most articles suggest a 50/50 solution of Isopropyl alcohol and distilled water if you don't want to purchase a commercially available cleaning product. Note the use of distilled water and NOT tap water. Commercial cleaning solutions are available and most articles recommend these.

Paper towels or paper products should NOT be used as they can scratch or damage the thin film that is on the face of the monitor screen. A good microfiber cloth is usually the recommended item to use and definitely do not apply excessive pressure when cleaning the screen
